HOSPITALITY
SOLUTIONS

Mixing colours is a breeze with Mallia™. With the enhanced selection of white, silver, champagne, pearl, dark silver, copper, brass, bronze and matt black, there is a colour for every style. Hotel designers are free to combine their choice of plate and rocker switch to highlight the hotel's atmosphere and identity.

In addition to switches, sockets, universal dimmers and BS 13A sockets with USB charger, Legrand's Mallia™ range also offers specific functions for the guest room. These functions enhance in-room comfort for guests and make work easier for hotel staff. For example, the "Do not Disturb/ Please make up room" internal and external units enable guests to make their choice at the push of a button. Other dedicated functions include the energy-saving key card switch and universal shaver socket.

With Mallia™, both style and functionality converge to create a pristine result. With the collection's dedicated hotel features you are sure to create a positive guest experience and a lasting impression.

With Arteor™, the universal range of wiring accessories, Legrand sets new standards in versatility and ease of use. As the range covers virtually every possible function, even the most complex hotel installations can come together in a uniform and consistent design.

The Arteor™ range is designed with the utmost attention to detail and style. Its bevelled profile, timeless finishes as well as unusual materials and textures all awaken the creativity of discerning decorators. The extended range today offers a choice of round and square rockers.

With Arteor™, technology, functionality and operability all adapt to the user. New comfort features such as the display thermostat or the 8 push-button control offer guests even more personalised service so that they can enjoy the comforts of home. Beyond everyday dedicated hotel functions Arteor™ also allows the integration of electrical installations with standard hotel building management systems.

Arteor™'s hospitality solutions provide carefully thought-out functions for guests and hotel operators alike, raising luxury to a new level. The Arteor™ range brings the final touch to any hotel project – whatever the requirement in design or technology.

HOTEL ROOM MANAGEMENT SOLUTION
With a complete offer to meet all needs, Legrand provides a specific system solution for each requirement. Solutions are designed to guarantee the best welcoming and supervision services, without overlooking the environmental aspects and the energy efficiency of all the areas of the establishment.
The guest room management system brings together two aspects: the supervision managed by hotel personnel and the customer's user experience.

COMFORT: MANAGEMENT OF USERS
The Guest Room Management System enables the customer to be perfectly in tune with the room, thanks to a range of devices used to create the desired atmosphere as far as lights, music, and temperature are concerned.

RESPECT FOR THE ENVIRONMENT: ENERGY MANAGEMENT
The Guest Room Management System gives the hotel establishment the possibility of reducing energy consumption thanks to the capability of disabling the devices inside the room when the customer is absent.

SAFETY
Thanks to the RFID technological devices, the system ensures maximum safety in the control of access to rooms and other zones.

SUPERVISION
The Guest Room Management System offer enables hotel operators to supervise and control the status of rooms in real time, as well as interact with them.

Using the supervision software installed on the reception PC, it is possible to interact with the following room parameters:
- Presence of guests
- Temperature display and modification of the adjustment values
- Display, for each room, indicating who is inside (customer or staff)
- Programmed scenario activation
- Alarm notifications and management of contacts (window, door, etc)

The software allows the possibility of managing and programming the key cards with RFID (Mifare) technology to access rooms and common areas.

NEW PREMIUM OFFER : TOUCH INTERFACES
The offer of products for the design and realisation of hotel systems is expanded by a new range of touch technology customer interfaces, which allow guests to optimise and
improve the way they manage the room.

ABB-TACTEO: THE INDIVIDUAL TOUCH

The ABB-tacteo KNX sensor is a capacitive control element for the intelligent building automation of high-end luxury hotels, offices and public and residential buildings. Each sensor can be individually configured to the hotel's specific needs. ABB-tacteo KNX meets the highest levels of quality and comfort: from blinds, lighting and heating to media and access, everything is easy to control.

COMPLETE COMFORT

When it comes to functionality, the light, blinds, air conditioning and heating all work together to create the right atmosphere. Your guests will enjoy every second of their stay and look forward to their return. ABB products ensure that several elements can simply and intuitively operate together, even with a variety of room functions. For example, the blinds move automatically depending on the position of the sun. Guests can control the heating, ventilation and air conditioning with the touch of a finger and a glance at the display thanks to the innovative technology of ABB i-bus® KNX.
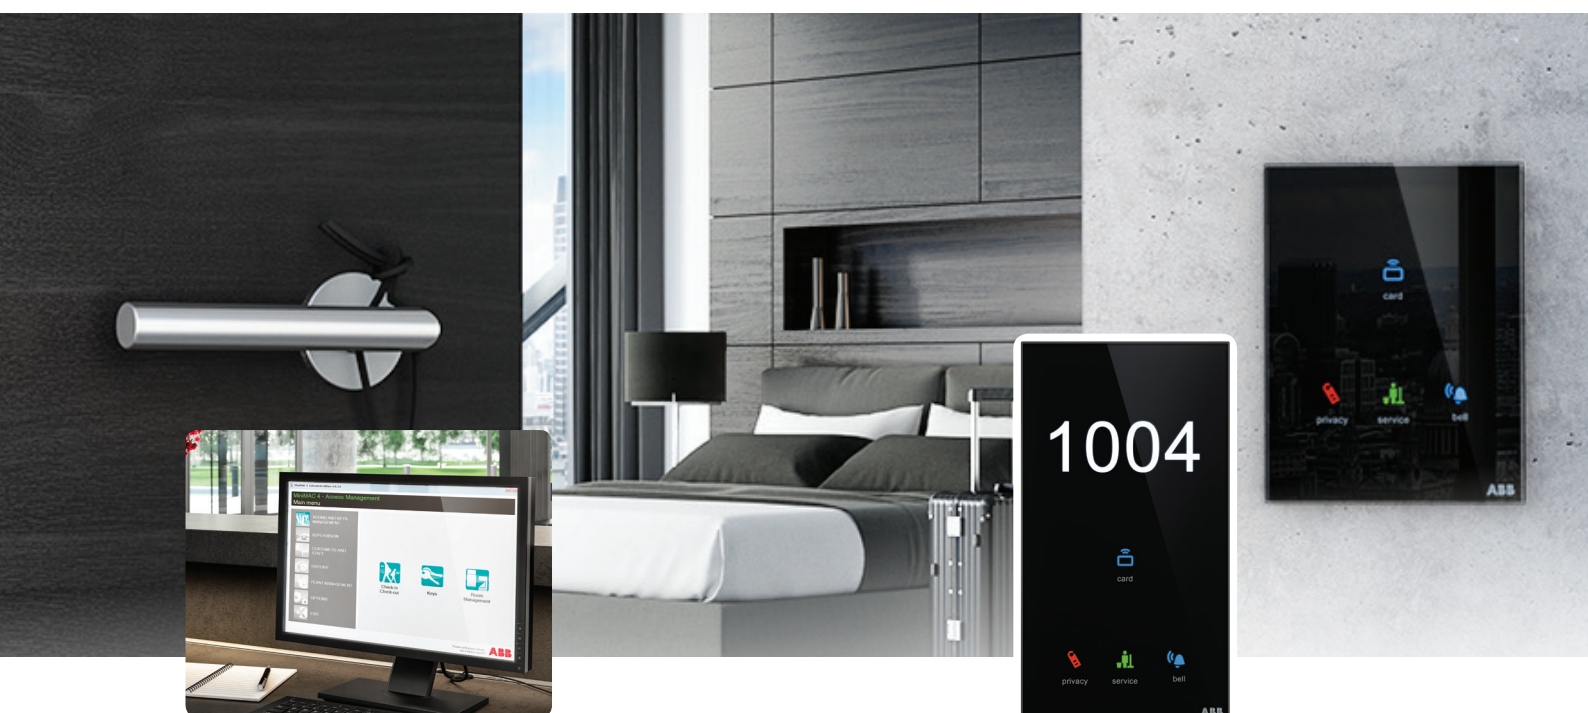

MEASURABLE EFFICIENCY AND LOWER COSTS

The increased efficiency of ABB i-bus® KNX solutions is demonstrated primarily by the fact that all of the hotel functions intertwine and are controlled in one complete system. For instance, the ventilation does not impair the heating capacity; instead, it supplements it. The indoor climate and lighting are determined by windows monitored by sensors, making the most of natural heating and light. Everything is connected, precisely controlled and closely monitored.

SYSTEM MANAGEMENT AND CONFIGURATION SOFTWARE

ABB provides software for the access control system with functions for managing rooms, performing guest check-in registration procedures, supervising and configuring the system. The MiniMAC configuration and management software has an integrated supervisor system for controlling alarms (e.g. bathroom alarms, technical alarms, fire alarms, etc.) and loads (e.g. lighting of common areas, electrical utilities, air conditioning, etc.).
The same software is designed to monitor access to the building and to restricted areas, thereby allowing a record of all events.

The openness and flexibility of the KNX-standard Home & Building Automation solutions also allow future integration with intrusion detection and fire protection platforms, ensuring total safety for guests, staff and facilities. The software's flexibility allows hotels to design a system capable of satisfying every need, from the most complex to the simplest applications.

ABB's Home & Building Automation Systems for hotel applications offer guests an all-round captivating experience, while providing significant operating and financial advantages.

NETWORK AND CABLING

COMPLETE INFRASTRUCTURE AND DESIGN SOLUTIONS

EL ELMASCO

Elmasco offers complete copper, fibre and WiFi infrastructure solutions for hotels.
With Fibre to the Room technology, a single fibre cable to the hotel room can accommodate an array of different services i.e. IP TV, IP Telephony, KNX, WiFi, etc. Fibre to the Room (FTTR) is an energy-saving solution adopted by the Hospitality Technology New Generation (www.htng.org) to offer a robust, high- speed, efficient infrastructure for modern hotels. FTTR has been embraced by large and famous hotel operators around the world as a cost-effective technology which offers hotel visitors an unprecedented high-tech experience.
Elmasco's solutions are sourced from established international leaders in the field.

Nexans
THE GLOBAL LEADER IN COPPER AND FIBRE CABLING SOLUTIONS

As a cable and telecom leader, Nexans Cabling Solutions offers Fibre to the Office Ethernet technology, structured cabling and digital ceiling infrastructures for WiFi 6 solutions. The manufacturer provides a complete range of cables and connectivity products, local training and support, with major references in the hotel sector.

OPTOKON®
THE LEADER IN GPON FTTH AND GPON PASSIVE AND ACTIVE SOLUTIONS

OPTOKONcept is the complete FTTH / GPON turnkey solution for broadband connectivity providing users with high-speed unlimited bandwidth and services directly to their own homes and premises. This technology requires the installation of new transmission, wiring, and receiving infrastructure networks to provide users with voice, video and telephony services.

optimize! softing
THE GLOBAL LEADER IN PASSIVE AND ACTIVE CABLING AND NETWORK TESTING

A global leading manufacturer of IT infrastructure measurement technology, Softing enables you to optimise your work processes, whether you are certifying copper and fibre optic cables after installation with the WireXpert, or troubleshooting an office network with the NetXpert Ethernet network tester. Softing handheld certifiers and testers are approved by independent tests from over 30 vendors, and by the ETL international test lab. Make the switch to Softing and join the cable installers and network operators around the world who are now experiencing improved efficiency and an optimised work process.

ekahau
WIRELESS DESIGN
THE INNOVATION BEHIND SMART WIRELESS NETWORK DESIGN.

Ekahau is an international leader in solutions for enterprise wireless network design and troubleshooting. More than 15,000 customers, including 30% of Fortune 500 companies, run their networks with Ekahau's Wi-Fi planning and measurement solutions.
Ekahau software and hardware solutions design and manage superior wireless networks by minimising network deployment time and ensuring sufficient wireless coverage across all industries, project sizes, building infrastructures and levels of complexity. Ekahau is recognised for delivering the easiest-to-use and most reliable solutions for Wi-Fi planning, site surveys, troubleshooting and optimisation.
Whether a corporate office, hotel, hospital or university – if the Wi-Fi works well, it has likely been built using Ekahau's Wi-Fi Design solutions.
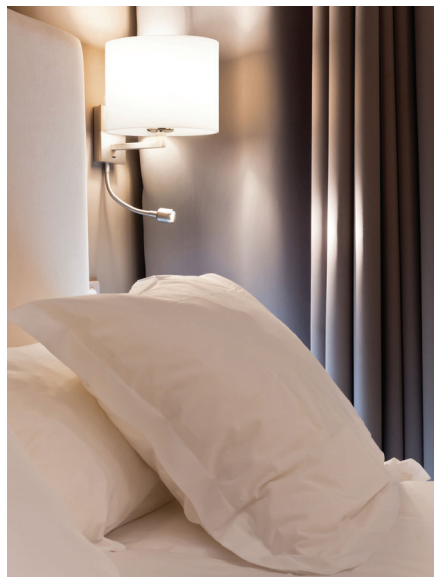

Elmasco's lighting collection caters for a broad spectrum of styles and applications, ensuring that professional customers always receive the best combination of aesthetics and technology for their space. Sourced from reputable manufacturers, our products reflect sophisticated designs while providing superior reliability and functionality.

Further, our extensive light bulb range is designed to provide energy-efficient lighting solutions for almost any application. As part of our goal to offer our customers the best in cutting-edge technology, we only stock light bulbs bearing excellent international certification. Our main range of LED light bulbs is manufactured by General Electric and integrates optimal functionality with design.

As a whole, our lighting collections cover all the needs of the hospitality industry, ranging from LED and fiber optic lobby lighting, guest room lighting, restaurant and café pendants, conference room luminaires, landscape lighting and much more. With the right lighting, our clients can create a welcoming atmosphere for their guests, a pleasant working environment for their staff and reinforce their hotel identity.

As a company, we greatly value each individual customer and appreciate that every decorating project is unique. Proof of this is our diverse client base, which includes hotels, restaurants, cafés, showrooms, interior designers, electricians and private consumers. Coupled with its energy efficiency, our selection offers smart, elegant lighting solutions to satisfy each client.
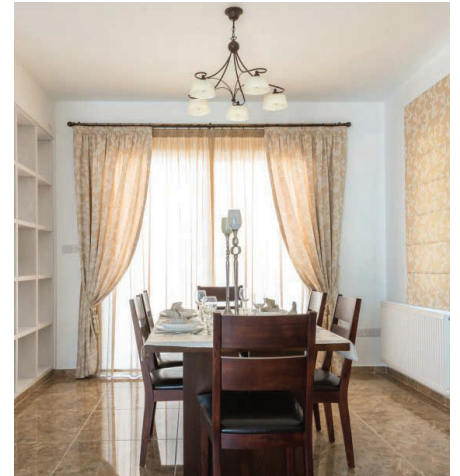

WHAT CAN WE DO FOR YOU?

Serving customers through eight showrooms across the island, our main goal and promise is customer satisfaction. We go the extra mile to engage with our clients, understand their requirements and meet their specific needs.

As a professional, whether you are looking for high-quality electrical solutions suited to your hotel guests, or would like to brighten up your café in style, we offer you functional, impressive products for all your electrical and lighting needs.
